

Ordering Album Assembly in LabPrints

Full Color now offers album assembly for the Premira Album. To order album assembly, you must use the LP Composite Designer add-on in the LabPrints software. When placing an order for an Assembled Album, please do not order additional prints in the same order. Follow the instructions below for creating an album and ordering the album assembly.

Creating an Order

- In LP Composite Designer, create a new composite for each page of the album, naming the composite with a 3 digit number that is the page number, i.e. 001, 002. (Figure 1)
 - If the page consists of only one image, it still needs to be placed in a template with the correct page number for a name. (Figure 2)
 - When creating a panoramic, name the composite with both page number, with a space between, i.e. 004 005.
- After creating the composites, close LP Composite Designer and order the pages you need. (Figure 3)
 - If you are ordering an album with a photo window on the cover, order a 4"x4" print for the opening.
- To place the order, go to Projects - Create Lab Order.
 - If you want embossing, enter the text* in the "Notes to Lab" section, label text "Line 1:" and "Line 2:." (Figure 4) Click "Next."
- In Step 2, click "Add Order Services," and choose the album from the Album Assembly category.
 - If you want embossing, choose the option from the "Album Options" section. Remember to enter the text* in the "Notes to Lab" section.
- You can also order finishing service for the prints under the "Add Order Service" tab.
- Click "Save & Close" and then "Finish" to send the order to Full Color.
