# FOS School Features

- 1** Import: Creates a project from data provided by the school and assigns each student a sequential record number.
- 2** Export for Shoot Cards: Sends the data in the project to Full Color to create camera cards used to identify student pictures when photographed.

- 3** Packages sold are defined for rapid ordering of prints.
- 4** Fields can be added to the database using this function. (No customer has ever needed to use it.)
- 5** Cropping, color management and die cut wallet instructions can be set

- 6** Export to ImageMatch is used to extract the project data when ready to order the school yearbook cd.
- 7** Export Project Data will create a spreadsheet containing the complete project file in record number sequence.
