

Merging Two Databases

The screenshot shows the Photolynx ImageMatch software interface for a database named 'Lynx High School.mdb'. The main window displays a grid of 11 student portraits, each with a corresponding data record below it. The data records include fields for ID, name, and other attributes. A control panel at the bottom features navigation buttons and a status indicator showing 'Matched 12 of 12' data and images, which is circled in red. An 'Image Directory List' on the right shows two entries: 'E:\Lynx High Sc ...\LHS Photos' with a quantity of 9, and 'E:\Lynx High Sc ...Wakeup Day' with a quantity of 2.

ID	Image File	Record ID	Name	Other Info
0001	001.JPG	6	LIMERICK MARY	239343

E:\Lynx High Sc ...\LHS Photos	9
E:\Lynx High Sc ...Wakeup Day	2

Open the first database, and make sure that it contains the same number of images and records.

Merging Two Databases

The screenshot shows the Photolynx ImageMatch software interface. The 'File' menu is open, and 'Restore Job' is selected. A sub-menu is visible with 'Restore Saved Job Ctrl+R' and 'Append Saved Job' highlighted. A 'Load ImageMatch Job' dialog box is open, showing a file selection window with 'Lynx High School Seniors' selected. The main interface displays a grid of student portraits with corresponding names and IDs. The 'Image Directory List' on the right shows two entries: 'E:\Lynx High Sc ...\LHS Photos' with a quantity of 9, and 'E:\Lynx High Sc ...Wakeup Day' with a quantity of 2. The bottom status bar shows 'Matched 12 of 12'.

Choose **File: Restore Job: Append Saved Job** and open the second mdb file.

Merging Two Databases

The second database is now appended to the first one. Save the merged databases under a new name.
